*We need your help to stop the construction of one of the largest and most heavily polluting power plants in the western U.S. **Please make a special gift today.***

EARTHJUSTICE

Because the earth needs a good lawyer

**Fight
Global Warming!**

Dear Gary,

If it's built, Nevada's White Pine coal-fired power plant would spew 13 million tons of new greenhouse gases into the atmosphere each year—speeding up global warming and air pollution.

We need your help to make sure this never happens.

Please make a special gift today to halt Nevada's White Pine coal plant and support a clean, sustainable energy future.

Just weeks ago, Earthjustice attorneys filed a lawsuit to halt the White Pine coal plant. If the White Pine facility is built, it would be **one of the largest and most heavily polluting power plants in the western United States.**

We've had some successes and we have coal on the run, but we can't stop now.

White Pine is just one of the many power plants we're challenging to curb global warming emissions, reduce toxic pollution, and set our country on the right energy path.

Please make a special gift to support a clean, sustainable energy future.

Just last week, as a direct result of Earthjustice's two-year court battle, the backers of Montana's Highwood coal-fired power plant dropped plans to build the coal plant.

But we couldn't have stopped this plant—which would have generated 2 million tons of greenhouse gases each year—without the financial support of folks just like you ... and we are counting on you to help us continue clearing the way for a clean, sustainable energy future.

Make a special gift today to help us fight global warming and pollution.

**Fight Global Warming and
Pollution: Prevent new
coal-fired power plants!**

DONATE TODAY!

By giving to Earthjustice, you will help fund our work to curb greenhouse gases from coal-fired plants, including:

- Overturning Wyoming's approval of the Dry Fork coal-fired power plant, which would emit nearly 4 million tons of greenhouse gases every year ... and spew destructive gases like sulfur dioxide into the air of nearby areas.
- Opposing the expansion of the Seminole coal-fired power plant in Florida, which would generate 6.5 million tons of greenhouse gases each year.
- Halting the construction of the Desert Rock coal-fired plant in New Mexico, which would spew more than 12 million tons of greenhouse gases annually—equivalent to the exhaust from 2 million cars.

Make a special gift today to stop dirty, coal-fired power plants and set us on the right energy path.

Thank you for all that you do.

Sincerely,

Trip Van Noppen

Trip Van Noppen
President, Earthjustice

P.S. With your first contribution of \$15 or more, we'll send you a sturdy, roomy Earthjustice tote bag—made from 100% unbleached cotton—so you can reduce waste and show your support for the environment. It's our way of saying thank you for your support.
